Abstract:

PROBLEM TO BE SOLVED: To increase the sealability by an inner lid so that the inner lid is uniformly sunk over the whole circumference thereof when the screwing force of an outer lid is applied thereto.

SOLUTION: This airtight container comprises a container body 11, the inner lid 12 to cover an opening part of a storage part 11a provided on the container body 11, and an outer lid 13 which surrounds the inner lid 12 to be screwed to the outer circumference of the container body 11, and the inner lid 12 is pressed in a sealing direction by adding the screwing force of the outer lid 13 to the inner lid 12. A turning spindle 16 suspended perpendicularly to the inner lid 12 is provided on an outer circumferential edge part of the inner lid 12. The turning spindle 16 is rotatably fitted to the container body 11, the movement in the axial direction of the turning spindle 16 is permitted at this fitting part, and the inner lid 12 is entirely pressed down by this axial moving function and uniformly abutted on the whole circumference of the opening part of the storage part 11a.

Gayle

Thank you always for reminding us of these.

I must believe 2002-2742 is for the JP-A publication. I believe an abstract can be retrieved from you end. I'll have to ask Yoshino whether they have any other art in mind. Can you tell me when the information is needed?

Iko

Iko:

An Information Disclosure Statement is due on the above case. There are no known patents/publications listed on the IFIF and none in the Background of the Invention section of the application (except for patent disclosure 2002-2742). Do you know of any documents to be listed on the IDS? And, where do I obtain a copy of 2002-2742? I am not familiar with this type of document.

Thanks for your help.

Gayle
